Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being clearly anticipated by Johnson et al.

Johnson teaches an apparatus body 10 that has an internally installed speed reduction motor 78, column 4, lines 39-40. A sleeve 77c is also taught as being positioned on a driven screw rod 77b. A support rod 80, 82, is movably linked to each of the two sides of the sleeve 77c. The support rod 80, 82, is extended and movably coupled to a swinging appendage 18, 20. Each appendage 18, 20, is affixed onto a hinge as shown in figure 2. The two hinges are mounted on the two sides of the apparatus body such that the motor rotates and controls the sleeve to drive the support rods raising and lowering the swinging appendages. While Johnson may not teach using the device for stretching the arms the device is clearly able to do such function. There appears to be no clear structural limitations claimed that would define over Johnson.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Johnson et al. in view of Annas.

Annas teaches another table for stretching and rehabilitation that includes a swinging appendage B driven by a motor and support rod for swinging the appendage and also allows for horizontal adjustment by pivoting about y axis. It would have been obvious to one of ordinary skill in the art to modify Johnson to include a horizontal pivot axis as taught by Annas in order to provide more degrees of movement stretching and exercising more muscles.
